

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

- 1-13. (Cancelled).
14. (Previously Presented) A computerized system comprising:
  - a processor;
  - a memory coupled to the processor through a system bus;
  - a computer-readable medium coupled to the processor through the system bus; and
  - a color template design module executed from the computer-readable medium by the processor to cause the processor to generate a histogram for a source image, and to suggest a color based on the generated histogram to serve as the color for a template design that is used to display the source image and is separate from the source image, the suggested color being applied to portions of the template design selected from a group consisting of framing, mat, background, and foreground portions of the template design.
15. (Previously Presented) The computerized system of claim 14, wherein the color template design module automatically selects the suggested color.
16. (Original) The computerized system of claim 14, wherein the color template design module causes the processor to display at least one template design and at least one color for the template design.
17. (Original) The computerized system of claim 14, wherein the color template design module causes the processor to indicate a selected portion of the source image, wherein the selected portion is used to generate the histogram.

18. (Original) The computerized system of claim 14, wherein the suggested color is applied to the portions of the template design selected from a group consisting of framing, mat, background, and foreground portions of the template design.

19. (Original) The computerized system of claim 14, wherein the color template design module causes the processor to execute an internet browsing application, and generate a web page containing data that displays information selected from a group consisting of color template design data, advertisements, banners, text, graphics, and hotlinks.

20. (Original) The computerized system of claim 14, wherein the color template design module causes the processor to receive compensation for providing the color template design.

21. (Original) The computerized system of claim 14, wherein the color template design module causes the processor to provide at least one color for selection by a user, and allow the user to select at least one of the provided colors.

22. (Original) The computerized system of claim 21, wherein the color template design module causes the processor to select from a group consisting of multiple colors and present the colors to a user for selection concurrently.

23 - 26. (Cancelled).

27. (Currently Amended) A computer-readable medium ~~having storing~~ computer-executable instructions that, when executed by a processor of a server computer, to cause the server computer to perform ~~a method~~ the operations comprising:

generating a histogram for a source image; and

suggesting a color for subsequent user selection based on the generated histogram to serve as the color for a template design that is separate from the source image and operating as one of a foreground and background portion.

28. (Previously Presented) The computer-readable medium of claim 27, wherein the suggesting of the color is automatic with subsequent adjustment of the color by a user if the user rejects the color automatically suggested.

29. (Original) The computer-readable medium of claim 27, further comprising:  
executing an internet browsing application; and  
generating a web page containing data that displays information selected from a group consisting of color template design data, advertisements, banners, text, graphics, and hotlinks.

30. (Original) The computer-readable medium of claim 27, wherein the suggesting further comprises:  
providing at least one color for selection by a user; and  
allowing the user to select at least one of the provided colors.

31 - 33. (Cancelled).
